

PROJECT MANAGEMENT

SOFTWARE REQUIREMENTS

PROCESS STAGES

PLANNING PHASE

KEY ACTIVITIES

• SOFTWARE REQUIREMENTS

UNDERSTAND THE BUSINESS ENVIRONMENT, PROCESSES AND RISKS

- **Universe Management:** Provides a centralized repository to define and maintain an audit universe with mapped entities, facilitating an understanding of business processes and risks.

DEFINE OBJECTIVES, SCOPE, AND TIMELINE FOR THE AUDIT

- **Audit Planning Tools:** Enable the creation of annual and process / entities specific audit plans with clear objectives and timelines.

CONDUCT RISK ASSESSMENTS AND DEVELOP AN AUDIT PLAN

- **Risk Assessment Tools:** Tools to evaluate and score risks, helping prioritize audit areas based on associated risks.
- **Audit Planning Tools:** Integration of risk scores into audit plans for risk-based prioritization.

PREPARE A DETAILED AUDIT PROGRAM

- **Templates and Checklists:** Customizable templates for creating detailed audit programs and checklists tailored to specific audit areas.
- **Audit Planning Tools:** Link audit program details directly to planned tasks and activities.[Task creation, Progress Monitoring, Resource allocation]

SCHEDULE MEETINGS AND SET DEADLINES

- **Scheduling Tools:** Integrated calendars for scheduling meetings with stakeholders and setting task deadlines and automated reminders and notifications for upcoming deadlines.

FIELDWORK/EXECUTION PHASE

KEY ACTIVITIES

• SOFTWARE REQUIREMENTS

PERFORM TESTS (SUBSTANTIVE AND CONTROL) TO EVALUATE INTERNAL CONTROLS

- Task assignment to specific auditors responsible for performing tests.
- Real-time tracking of testing progress and updates on task status.
- Generation of list of requirements against the specific audit programs
- Sending the list of requirements to auditee and tracking and sending reminders on due dates to auditee and management as per defined escalation mechanism.

COLLECT EVIDENCE AND DOCUMENT FINDINGS

- Ability to upload evidence in multiple formats (e.g., PDF, Excel, images and videos).
- Metadata tagging for evidence files to ensure easy categorization and quick retrieval.
- Maintain audit working papers to record findings, observations and procedures performed.
 - Link uploaded evidence directly to specific findings for a clear audit trail.

ANALYZE EVIDENCE TO IDENTIFY GAPS AND DEFICIENCIES

- A centralized platform to document and organize the results of evidence analysis.
- Version control for working papers, ensuring updates to analysis are traceable [maintaining a log of who made edits, when, and why.

REPORTING PHASE

KEY ACTIVITIES

• SOFTWARE REQUIREMENTS

DRAFT AND FINALIZE AUDIT REPORTS SUMMARIZING FINDINGS AND RECOMMENDATIONS

- Templates for drafting reports with customizable layouts to align with company standards
- Restricts access to ensure that only authorized personnel can draft, review or approve reports.

DISCUSS FINDINGS WITH MANAGEMENT AND INCORPORATE THEIR RESPONSES

- Allows management to provide responses or clarifications on findings within the software.
- Ensures that management has the necessary access to review and comment on reports without compromising data security. [Role-based permissions]

DISTRIBUTE THE FINALIZED REPORT TO STAKEHOLDERS

- The software allows finalized reports to be exported in widely used formats such as Excel, PDF or Word.
- Reports can include dynamic features such as hyperlinks to evidence or working papers stored in the system.
- Options to include summaries, visual charts and attachments
- Integration with email or secure portals for sharing the finalized report with relevant stakeholders.[Role Based Access]

FOLLOW-UP AND MONITORING PHASE

KEY ACTIVITIES

• SOFTWARE REQUIREMENTS

TRACK THE IMPLEMENTATION OF AGREED CORRECTIVE ACTIONS

- Assign responsibility for each corrective action to specific individuals or teams.
- ⑩ Monitor the progress of these actions with status updates (e.g., "In Progress," "Completed").
- ⑩ Use automated reminders to notify responsible parties of upcoming deadlines.
- ⑩ Escalation workflows trigger alerts for overdue corrective actions, ensuring accountability.

VERIFY THE RESOLUTION OF IDENTIFIED ISSUES

- ⑩ Real-time tracking of open and closed audit observations.
 - ⑩ Provide detailed logs for each audit observation, documenting the steps taken to address and resolve the issue.
- ⑩ Dashboards with visual indicators (e.g., progress bars, status flags) for management to review the resolution status.

CLOSE AUDITS AFTER SATISFACTORY RESOLUTION

- ⑩ Enable auditors to mark actions as completed once the agreed-upon corrective measures are verified.
- ⑩ Automatically close the audit in the system once all open issues are resolved and criteria are satisfied.
- ⑩ Generate a final report summarizing closed actions and their outcomes for archival and stakeholder review.

CONTINUOUS IMPROVEMENT PHASE

KEY ACTIVITIES

• SOFTWARE REQUIREMENTS

COLLECT FEEDBACK FROM STAKEHOLDERS ON THE AUDIT PROCESS.

- ⑩ Provide built-in tools to create and distribute surveys or questionnaires to stakeholders, capturing their feedback on the audit process (e.g., efficiency, communication, outcomes).
- ⑩ Allow customization of questions to focus on specific aspects of the audit (e.g., scope clarity, timeliness, and recommendations).

REFINE AUDIT METHODOLOGIES AND PRACTICES BASED ON LESSONS LEARNED

- ⑩ Allow auditors to revise and customize audit templates, checklists, and workflows within the system based on stakeholder feedback and identified improvements.
- ⑩ Track updates to methodologies, preserving a history of changes for future reference.
- ⑩ Include notes on why changes were made (e.g., feedback trends, audit standards updates) to inform future decisions.

GENERAL REQUIREMENTS

KEY ASPECTS

- **SOFTWARE REQUIREMENTS**

SECURITY AND ACCESS CONTROL

- ⑩ Role-based access for audit teams, management and auditees.
- ⑩ Encryption for data storage and transmission.

SCALABILITY

- ⑩ Support for increasing numbers of users and audits as the organization grows

DASHBOARDS AND ANALYTICS

- ⑩ Real-time dashboards for monitoring KPIs.
- ⑩ Visualizations for trends, risk assessments and audit statuses.

DEPLOYMENT OPTIONS

- **Cloud-Based:** For remote access and scalability
